Workshop on Dietary Assessment and Food Matching Tools

GLOBAL

Content

Intro Population Dietary Intake/Exposure Data Case Studies

Recap

What we do

Use Real-World Data

- Actual Consumer Habits & Practices Food/ Product Composition Chemical Concentration/ Occurrence • Market Share & Sales Data • US, EU, China, Brazil, Mexico, etc.

Run it through our Expert Models

- Probabilistic Exposure Assessment Predictive Intake Modelling • Total Aggregate Exposure What-If Scenario Analysis Population Dietary Intake

Provide Actionable Information and Insights

- Innovation/ R&D Decisions
- Investment Decisions
- Policy Decisions

Population Dietary Intake/Exposure

Exposure/Intake Assessment - Aim

For a given population of consumers, estimate the distribution of intakes of:

- Foods
- Food ingredients
- Nutrients
- Chemicals in foods
- Microbial pathogens
- Any other substance present in food

Exposure Assessment Output

Distribution of Subjects

Exposure (mg/kg/day)

Exposure Assessment Output

Distribution of Subjects

Exposure (mg/kg/day) Reference Dose

Basic Principle

Exposure/Intake

Amount Consumed

Χ

Concentration of Substance

Intake Statistics

The mean is the arithmetic mean or average exposure in the population:

$$\bar{x} = \frac{\sum_{i=1}^{n} x_i}{n} = \frac{x_1 + x_2 - x_2}{n}$$

Can also be calculated using statistical weights:

$$\bar{x} = \frac{\sum_{i=1}^{n} w_i x_i}{\sum_{i=1}^{n} w_i} = \frac{w_1 x_1 + w_2 x_2}{w_1 + w_2}$$

 $+\cdots+x_n$

2

 $+\cdots+w_nx_n$ $\cdots + w_n$

Percentile: The value below which a certain percent of observations fall: i.e. the P20 is the value below which 20% of the exposures fall

Can also be calculated with statistical weights

In risk assessment, the upper percentiles are typically most important, e.g. the P95 of exposure.

Exposure Percentiles

Predictive intake modelling application

Population Dietary Intakes -Data

Unlocking the value in data

Required Inputs – Food Consumption Data

- Food consumption diaries/databases

- Typically 100,000+ lines of consumption data
- Subject demographics needed also

Nationally representative surveys of food consumption

• Total diet of 1,000+ consumers recorded for 1 or more days

Types of Dietary Surveys

- 24 hour recalls (one or more days)
- 3, 4, 5, 6 or 7 day records
- Consecutive and non-consecutive days
- 48 hour recalls
- Weighed vs estimated
- Food Frequency Questionnaire (FFQ)

aggregation vary

NB: Food categories are specific to each database. Levels of

Amounts reported: raw commodities or as consumed

Types of Dietary Surveys

Food record/diaries

24 hour recall

Food frequency questionnaire (FFQ)

Diet history

Food habit

does not rely on memory easy to quantify amounts open-ended

little respondent burden no literacy requirement does not alter intake behaviour

relatively inexpensive preferable method for nutrients with very high day variability does not alter intake behaviour

no literacy requirement does not alter intake behaviour open-ended

rapid and low cost does not alter intake behaviour open-ended high participation burden requires literacy may alter intake behaviour

relies on memory requires skilled interviewer difficulty to estimate amounts

relies on memory requires complex calculations requires literacy limited flexibility for describing foods

relies on memory requires highly trained interviewer difficulty to estimate amounts

may rely on memory questionnaires may require a trained interviewer

Food Concentration Data /Other Data

Type of Data:

- Point estimates at food or food group level
- Known ranges
- Empirical distributions (e.g. a set of analytical determinations)
- Parametric distributions (derived) from a set of data)
- Level of Occurrence
- Can all be used probabilistically

- **Source of Data:** Survey data
- Publications
- **Proprietary data**
- Other databases/reports:
- Linked to the survey
- Not linked to the survey

Food Grouping

garden currant		
Strawberry		
Tea		
Walnut		

allowing for random sampling of concentrations.

Concentration data from eBASIS analysed and formatted into discrete data distributions of concentrations for each food-compound pair,

(-)-Epicatechin (Flavanols) - Apple

eBASIS concentration data from apple ranged from 0.005-0.115 mg/g

Table 1: Provisional results for Epicatechin intakes from Apples for UK total population and consumers only

	Total Population		Consumers C
	Apple Intake	Exposure Range	Apple Intak
	(g/d)	(mg/d)	(g/d)
P25	0	0-0	25
Mean	21	0.105-2.415	45
P95	87	0.435-10.01	118

Dnly Exposure Range \mathbf{e} (mg/d)0.125-2.875 0.225-5.175 0.59-13.57

Reformulation Project

- Focus on 'reformulation' 600 products

reformulation-report?OpenDocument

14 companies – indigenous and multinational

Total fat, saturated fat, sugar, sodium, energy

• Impact on dietary intakes between 2 time points

<u>http://www.fdii.ie/Sectors/FDII/FDII.nsf/vPages/Publications~fdii-creme-global-</u>

3 Data sources:

- IUNA food consumption surveys
- Market Share Data from Kantar Worldpanel

• FDII member data on composition of reformulated product portfolios

Mean Nutrient Intake Reductions

Sodium

New Products & Predicting Health Outcomes

Product: high in B2 and Potassium Impact on Population Intakes

- Brazil and China: 45+ years, Normo-, pre- & hypertensive
- **Baseline Population Intakes**: determine Nutritional Status
- **Carry out Intervention** i.e. food replacement, introduction of product into the diet
- Based on Meta Analysis Studies, Assess Impact of Intervention on Health Parameter
- Genotype (MTHFR) probabilities, Individual blood pressure data (SBP)

Shift in Nutrient Intake before and after Intervention

Distribution of Subjects

Intake (mg/day) Reference Intake

Impact on SBP in Total Population

Baseline

Conservative

Optimistic

Normotensive Prehypertensive Hypertensive

Impact on SBP in Product Consumers

Baseline Conservative Optimistic

Normotensive Prehypertensive Hypertensive

Recap

- Tool: (Predictive) Intake Modelling Software
- Probabilistic vs deterministic
- Understand data sources and gaps

 Data: Food Consumption, Food Composition, Recipe, Additive, Pesticide, Contaminant, Bioactive, Subject Demographics...
